

# Spotify Musical Data Model

Group: Juan Josev Jimenez, Janis Herrmann, Petre Dragos, Filip Novy

## Description dataset

The dataset is collated from Spotify's API using two separate python scripts to extract popular and non-popular songs and their associated audio and descriptive features. Descriptive features of a song include information about the song such as the artist name, album name and release date. Audio features include key, valence , danceability and energy which are results of spotify's audio analysis. The combined features used in the experimentation phase of this project include:

## Research questions

**Justification:** In order to analyze and compare musical data, there is a need for a common standardized visual model to equally compare musical sets, them being genres, subgenres or specific songs to other songs.

Thus we respond to the question;

**Can we standardize a visual model for Musical features**

### Sub questions

What differences can be extracted from the musical genres listening habits of different countries?

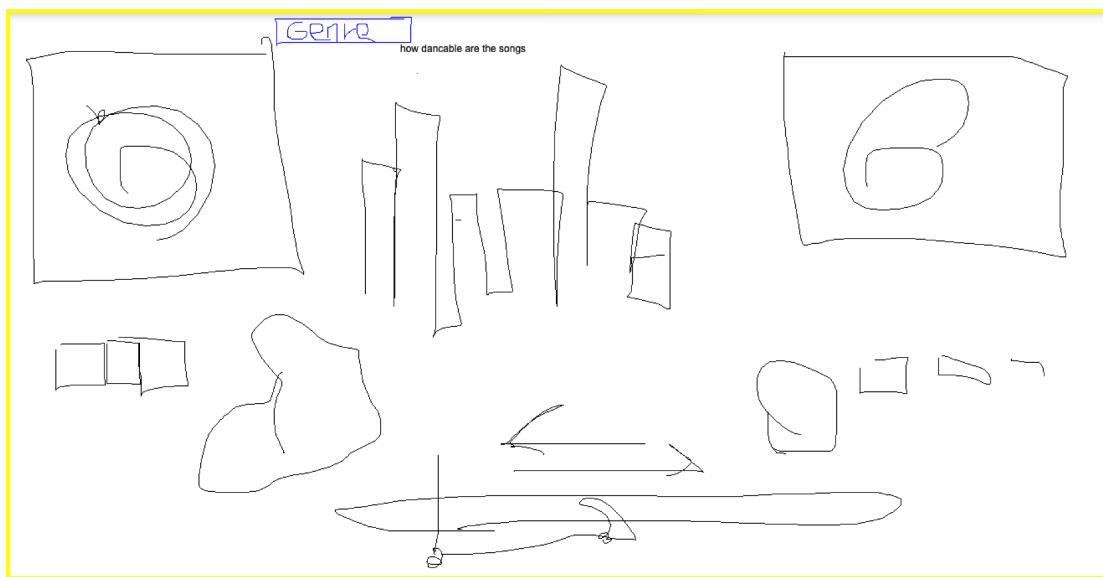

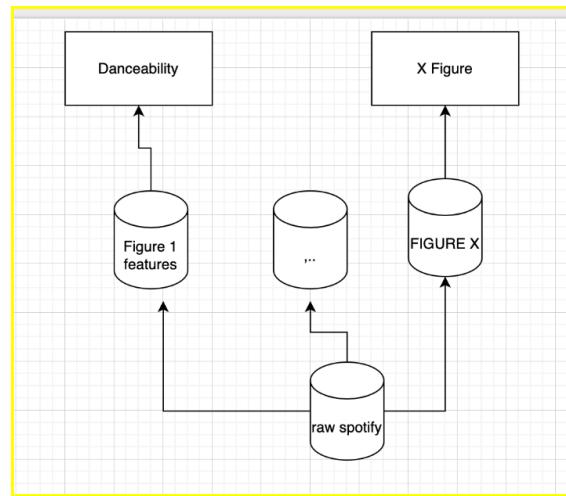

How are music characteristics developing through time?. (Can we map the influence of music to events occurring in the world?)

## Initial tasks assignments to each of the group members.

- Architecture of the model: (all)
  - GME: General workflow and System Design
  - Framework
  - Data engineering components
  - Dependencies
- Component development (figures) (Janis Filip)
  - Figures
    - General
    - Specific figures
- Feature analysis and exploration (Janis Filip)
  - Explore possibilities of representation: what can be exposed.
    - Dimensions
    - Variables
  - Engineer features for each figure
- Data Engineering (dragos)
  - Preprocessing and postprocessing:

Preprocess and prepare data for the system and general and component level.
- Visuals: (Juan)
  - Design level.
    - CSS
    - Show how can we represent each of the features visually
    - Colors and visual choices.

(4) initial sketches and drawings, alternative considered (optional, only if you already have it).

### Dashboard Layout

50s    60s    70s    80s    90s    00s    10s    20s  
Genres  
just stacked  
barcharts  
nothing to  
see here :)
